ABSTRACT:

PURPOSE: To repeatedly replace plural alternate character strings and to obtain improving environment to select an optimum expression by equipping a means to input and store the plural alternate character strings to a designated character string and a means to replace the designated character string and the alternate character string.

CONSTITUTION: A means 46 to designate an arbitrary character string in a sentence, means 45 and 43 to input and store the plural alternate character strings to the designated character string and a means 44 to replace the

designated character string and the alternate character string are equipped.  
Accordingly, plural improving candidate character string, which are inputted with relating to an improving position in the sentence, are independently stored to the inside of an alternate character string storing means respectively and successively replaced with the character string in the sentence according to a replacing instruction. Thus, the improving work can be executed by repeating many times and the satisfactory improving environment can be obtained.
